

BALRAJ S

AI Implementation Engineer | Prompt Engineering & Agentic Workflows | Customer-Facing AI Solutions
Bengaluru, India | 8217370299 | balrajsrinivas03@gmail.com | [LinkedIn](#) | [GitHub](#) | [Portfolio](#)

SUMMARY

Final-year Electrical & Electronics Engineering student building hands-on depth in applied GenAI: designing multi-node agentic pipelines (LangGraph), engineering prompts and guardrails for reliable LLM output, and integrating agents with APIs, vector databases, and no-code automation platforms (n8n). Comfortable translating ambiguous requirements into working conversational and automation workflows, with direct experience solving production constraints (memory limits, hallucination control, multilingual output) on live-deployed projects. Seeking to bring this into a customer-facing AI implementation role, combining technical depth with clear communication.

TECHNICAL SKILLS

- AI / LLM Engineering: Prompt engineering, LangGraph agentic pipelines, RAG, function/tool calling, guardrails & hallucination mitigation, LLM evaluation
- Models & APIs: Mistral API, Claude, GPT-4o, Replicate (Flux); familiar with AWS Bedrock, Azure AI Content Safety, NVIDIA NeMo guardrail patterns
- Automation & Integration: n8n workflow builders, FastAPI, REST APIs, webhooks, Supabase (Auth, Postgres)
- Programming & Data: Python (APIs, data handling), SQL, ChromaDB (vector search), LangSmith (tracing/observability)
- Product & Delivery: Requirement gathering, conversation/flow design, multilingual UX (8 Indian languages), Git, Vercel/Render deployment

INTERNSHIP EXPERIENCE

AI Fellow | Bharat Unnati AI Fellowship, Bengaluru

- Learned prompt engineering fundamentals and core generative AI concepts through structured, project-based coursework.
- Built first hands-on automation: an n8n workflow connecting a Telegram bot with Google Calendar for scheduling.
- Applied productivity-focused AI tools (Notion AI, NotebookLM) for research synthesis and knowledge organization.

AI Product Development Intern | SDLC + AI

- Learned an end-to-end, AI-augmented software development lifecycle across a 16-pillar framework spanning requirement gathering, design, build, testing, and deployment.
- Applied the framework to plan and scope AI-assisted web product builds from concept through release.

AI Automation Intern | IKIGAI

- Learned Claude Code-based cowork workflows and connected them with Excalidraw and Obsidian for visual planning and knowledge-base management.
- Built automation pipelines using Python, n8n, and LangGraph for industrial workflow use cases.

PROJECTS

Decoda — React, FastAPI, Mistral Embeddings API, ChromaDB, Supabase, LangSmith

- Multilingual RAG platform for legal, medical, and government documents across 8 Indian regional languages; React frontend on Vercel, FastAPI backend on Render.
- Solved a production memory constraint by migrating from HuggingFace to Mistral Embeddings API, fitting the pipeline within Render's 512MB memory limit without losing retrieval quality.
- Instrumented the pipeline with LangSmith tracing for debuggability; scoped Phase 7 (Google OAuth via Supabase, JWT auth, per-user document ownership) for secure multi-tenant access.
- Researched and applied guardrail design patterns (PII detection, input/output filtering) drawing on AWS Bedrock, Azure AI Content Safety, and NVIDIA NeMo to harden the architecture against unsafe or hallucinated outputs.

BriefAI — LangGraph, Replicate (Flux), n8n, Mistral API

- Designed a 6-node agentic pipeline (Input Parser → Strategy Planner → parallel Copy Writer / Image Prompt Builder → Quality Checker → Response Compiler) that converts Hinglish product descriptions into ready-to-post WhatsApp and Instagram marketing copy.
- Integrated Flux image generation via Replicate and automated Instagram publishing through n8n workflows.
- Built a dedicated Quality Checker node to constrain tone, brand accuracy, and factual claims, directly applying hallucination-control techniques to a customer-facing output.

EDUCATION

B.Tech, Electrical and Electronics Engineering — Dayananda Sagar Academy of Technology and Management (VTU), Bengaluru
Final Year

ADDITIONAL

- Conference paper: "Development and Experimental Validation of a Sensor-Fused ROV Vehicle for Underwater Inspection" — submitted to AMISE 5.0; revised through peer review covering control system (PID) formulation, HSV image-processing pipeline, and hardware specification.
